PROFESSIONAL SUMMARY

Computer Science student at UC Irvine (GPA: 3.98) passionate about turning real-world problems into practical software solutions. Experienced developing AI-powered applications and backend systems with Python, C++, RAG, and multi-tool agents.

EDUCATION

University of California, Irvine

Sep 2025 - Jun 2028

BS Computer Science. GPA: 3.98. Dean's Honor List.

Relevant coursework: Intermediate Programming in Python, Discrete Mathematics, Programming in C/C++

CodePath

Feb 2026 - Aug 2026

Relevant coursework: Foundations of AI Engineering; Applications of AI Engineering; Advanced Tech Interview Prep

TECHNICAL SKILLS

- **Languages:** Python, C++, Java, SQL, JavaScript, HTML, CSS
- **Frameworks & Tools:** FastAPI, Docker, Git
- **Databases:** PostgreSQL, ChromaDB

EXPERIENCE

Learning Assistant, ICS 6B: Boolean Logic and Discrete Structures

Irvine, CA

University of California, Irvine

Mar 2026 - Present

- Earned the opportunity to continue as an LA for an additional quarter through strong performance and initiative.
- Supported 200+ students by proactively identifying those needing support during lectures, initiating check-ins, and using targeted questions to strengthen conceptual understanding.
- Improved course assessments by providing TAs with structured feedback on midterm problems, helping refine question clarity and reduce student confusion.

Tech Fellow, Foundations of AI Engineering

Remote

CodePath

May 2026 - Aug 2026

- Mentored 250+ students with approachable technical guidance across Slack, Zoom Q&A, and breakout rooms, earning consistently positive feedback during manager observations and helping sustain 8.8/10 session ratings.
- Unblocked 12-16 students across 3-4 breakout rooms per session by debugging issues and facilitating solutions.
- Helped students ideate AI projects by translating use cases into feasible technical designs and implementations.

PROJECTS

OnTask - macOS Menu-Bar Focus & Accountability App | Swift, SwiftUI, AppKit

[GitHub](#)

- Built and shipped a native macOS menu-bar productivity app used by 5 users, keeping a single current task continuously visible with time tracking to reduce task-switching and improve focus.
- Drove product iteration from user feedback, developing a second release with requested features and refinements while implementing SwiftUI/AppKit workflows for task state, timers, settings, and app lifecycle behavior.

Luminate Trends – Trend-Analysis Tool | Hack the Coast | Python, Streamlit

[GitHub](#)

- Placed in the top 4 teams, earning a sponsor invitation for an extended solution demo and follow-up discussion.
- Engaged directly with sponsors to understand business needs and translate them into a focused trend-analysis solution for Prince of Peace.
- Led backend development of a modular scoring engine ranking product trends across market opportunity, regulatory feasibility, implementation effort, and brand fit.

The Unofficial Guide – UCI Housing Research App | Python, ChromaDB

[GitHub](#)

- Built a RAG-powered housing research app enabling UCI students to find cited answers from 10+ student sources.
- Implemented a full data pipeline covering document ingestion, cleaning, chunking, embeddings, ChromaDB retrieval, and source-attributed LLM generation.
- Evaluated system reliability with 5 test queries measuring retrieval relevance, accuracy, grounding, and failure cases.
